Environmental Policy

UK Flood Barriers Ltd are committed to supplying products and services that meet the contractual, legislative, quality, wellbeing and environmental requirements of its undertakings. By this policy UKFB recognises its responsibility towards protection of the environment, and issues this statement as evidence of the commitment of the management and employees to minimising the environmental impact of its operations.

All business activities that affect the environment have been reviewed with any aspects, potential impacts and subsequent control measures included within our Environmental Impact Register. Particular emphasis has been attached to the responsible sourcing and waste management which are regarded as important aspects within our Environmental Management System.

We will achieve our policy by:

- Integrating the consideration of environmental concerns and impacts into all of our decision making and activities and whenever possible choosing the best environmental option available.
- Striving to continually improve our environmental performance by periodical reviews, audits and targeted annual environmental improvements. Amendments will be made to our environmental policy, procedures and planned activities as and when needed following legislation and lessons learned.
- Reducing waste through replacing, reducing, reusing and recycling. We will encourage the use of recycled, refurbished products, materials and procedures where alternatives are available, economical and suitable and where this is allowed within the terms and conditions of our contractual undertakings.
- Promoting efficient use of materials and resources throughout our facility including water, electricity, gas, raw materials and other resources, particularly those that are non-renewable.
- Avoiding unnecessary use of hazardous materials and products, seeking alternatives or substitutions when feasible, taking all reasonable steps to protect human health and wellbeing and the environment when such materials must be used, stored and disposed of.
- Complying with current environmental legislation.
- Promoting, communicating and encouraging our sub-contractors, clients and employees to support us in our commitment to change. This statement will be displayed in prominent positions at head office, on site and can also be found for public perusal on our website at www.ukfloodbarriers.co.uk
- Following a pre-planned program of environmental awareness we aim to educate our employees to achieve behavioural change and an environmental awareness culture. Engagement in our practices and management commitment will encourage all employees to work to an ever improving and environmentally responsible manner.
- Minimizing the consumption of Fossil fuels and natural resources.
- Environmental issues are controlled in accordance with ISO14001:2004 to which we are certified.

Frank Kelly
